

New Network Services in the Portuguese NREN (RCTS) for supporting GRID networking

João Nuno Ferreira

Fundação para a Computação Científica Nacional

Abstract

During 2007 FCCN has conducted a survey of computing clusters in the Portuguese NREN (RCTS) and purchased new networking equipment to improve its support of GRID activities. At this BOF the results of the survey will be presented, as well as the new VPN-L2 networking service. The interim results of a small pilot test using this new service will also be presented.
